## **Classification Book Background**

The ADS bases this *2026 Classification and Handbook of Dahlias* on principles established by the Central States and American Dahlia Societies in the late 1930's and early 1940's, in addition to further refinements developed by joint classification committees of the two societies in 1948. Dahlia growers nationwide are indebted to these forward looking efforts that have made possible this current classification manual, based on show results and field observations throughout North America.

### **Criteria for Inclusion or Deletion from the *Classification and Handbook of Dahlias***

1. A cultivar that wins two blue ribbons in ADS-affiliated shows in a given year will be initially listed - or relisted after being dropped from the CHD.
2. A cultivar must win three blue ribbons during the last two-year period to remain listed.
3. A cultivar with a score of 85.0 or greater from either an official trial garden or seedling bench evaluation will automatically be listed for at least two years.
4. A cultivar that receives a classification committee change recommendation will be included in the CHD the ensuing year even if it does not receive two blue ribbons.

### **Cultivar Classification and Change Request Rules and Procedures**

1. All those who make cultivar classification change requests must be members of the American Dahlia Society.
2. For each change request, you must employ the following procedure: List the a) Current Cultivar Number, b) Cultivar Name, c) Cultivar Size, Form, and Color, d) Name of Person Requesting Change, e) Suggested Number of Cultivar Change, and f) the Change by Description. (For example, if the cultivar were Red (R), and the desired change were dark red (DR), Chip DR3 you would write in DR3 after the cultivar number change.
3. Cultivars that repeatedly receive requests for change may be retired from the change request process.
4. No request for cultivar classification change will be included without a break of at least one year from the last change request
5. All requests for change in cultivar color classification must include *American Dahlia Society Color Guide, 2003* chip identification, such as change cultivar XYZ from YL22 to BR10. Send classification change requests to any member of the Classification committee (members are listed on the inside front cover of the CHD).

## Length of Cultivar Names

The ADS Executive Board decided that more than 22 characters in a cultivar name will be truncated. Be aware that letters, numbers, spaces, apostrophes, periods or any other diacritical mark consist of a character. See *Bulletin of the American Dahlia Society*, September 2004, p. 11.

## Judging Size, Form, and Color

Disseminated dahlias, when entered by ADS Classification standards in ADS shows, will NOT be eliminated or disqualified for either oversize or undersize, misclassified form, or a variation in color or form from the classification book. Judges will assess a dahlia bloom strictly on its merits or deficiencies, such as color fading or insufficient ray florets and gaps in contour. Whenever the size, form or color of a cultivar exhibits characteristics other than classified, the cultivar should be submitted as a candidate for reclassification. Judges will also evaluate all of the scorecard characteristics by weighing each of them, and not solely basing their judgments on the merits or lack thereof for one quality, such as trueness to form. Note: The ideal form descriptions that appear here and in the Guide to Judging Dahlias are designed to help judges rank some of the fine points of a variety's formation and should not eliminate or disqualify an entry.

### Form

All dahlias in classes 0001 through 7715: Formal Decorative, Informal Decorative, Semi-Cactus, Cactus, Incurved Cactus, Lacinated, Ball, Miniature Ball, Pompon, Stellar, Waterlily and Novelty Double are fully double with the central rays spirally displayed. The mature petals that determine the size of the dahlia determine the dahlia formation. In the following descriptions, the "X" in the number range signifies size and can be replaced with 0 (AA), 1 (A), 2 (B), 3 (BB), 4 (M) or 5 (MC).

**X001—X015 FORMAL DECORATIVE** Dahlias: Ray florets are generally flat, broad, and smooth in a regular arrangement that gradually recurve toward the stem. Each ray floret row should convey uniform and regular size arrangement with the tips preferably round or extending to a slight point. The ideal depth is three-quarters the diameter of the bloom and should not be greater than its diameter.

**X101—X115 INFORMAL DECORATIVE** Dahlias: Ray florets may be twisted, curled, or wavy, and of uniform size in a regular or irregular arrangement. They may be partially involute or revolute, but no portion should be fully revolute or involute except at the tip of the ray floret. The ideal depth is three-quarters the diameter of the bloom and should not be greater than its diameter.

**X201—X215 SEMI-CACTUS** Dahlias: Ray florets are broad at the base, straight or incurved, and reflex toward the stem in a regular and uniform arrangement. Ray florets will be revolute for approximately half their length and fully revolute (touching or overlapping) for at least one-fourth their length. The ideal depth is three-quarters the diameter of the bloom and should not be greater than its diameter.

**X301—X315 STRAIGHT CACTUS** Dahlias: Ray florets are narrow at the base, straight, uniform in length and reflex toward the stem, radiating uniformly in all directions from the center. They will be revolute for the majority of their length and fully revolute (touching or overlapping) for approximately half their length. A depth of about three-quarters the diameter is ideal for this form.

**X401—X415 INCURVED CACTUS** Dahlias: Ray florets are pointed, narrow at the base, uniform in length and arrangement, revolute for the majority of their length, and fully revolute for at least half their length. They will curve upward to the bloom face, but may also arc downward and then up, or they may swirl horizontally around the bloom circumference, usually exposing the involucre in either case. Depth must be at least half the diameter.

**X501—X515 LACINIATED** Dahlias: Ray florets are split at the tip with the number and depth of the splits varying according to the size of the ray floret. The portion of the ray floret with the splits should uniformly twist or curl whether involute or revolute. The less mature ray florets should possess splits but do not have to twist or curl. In the ideal lacinated dahlia, the majority of ray florets will be uniformly arranged with a split, twist, or curl that conveys an overall fringed or frilled effect. Ray florets, slightly involute or revolute, that split regardless of length and remain generally flat are a major fault. Ray florets with a shallow notch or cleft and possessing little twisting to the extreme portion should not be classified as lacinated. The ideal depth is three-quarters the diameter of the bloom and should never be greater than its diameter.

**6001—6015 BALL** Dahlias: Blooms are ball shaped with uniform florets, involute for most of their length, and fully involute for more than half the length; the ray florets reflex completely toward the stem. Ray floret tips in cross-section should be circular and exhibit little distortion, completely filling the floral head and are either round or blunt without notch or point.

**6101—6115 MINIATURE BALL** Dahlias: Except for size, miniature ball and ball dahlias possess the same form features.

**6201—6215 POMPON Dahlias:** The ray florets are involute for the whole of their length and fully involute for half their length. Except for size they are similar to the ball description.

**7001—7015 STELLAR Dahlias:** Ray florets are long and narrow along their length with pointed tips preferred; like a star, they exhibit space between the ray florets in each of the rows and possess a uniform, regular arrangement. All the ray florets will have a partially involute form in an approximate “U” shape in cross-section for the majority of their length and will recurve toward the stem; the bloom depth should be greater than one half of the diameter but should not be greater than its diameter.

**7101—7115 MICRO STELLAR Dahlias:** Micro Stellar dahlias possess the same formation as Stellar dahlias except they are up to 2 inches in diameter.

**7301—7315 WATERLILY Dahlias:** The bloom should be fully double and symmetrical; the side view should be flat to saucer-shaped in arrangement, and the layer of florets should be open faced to give a delicate appearance. The center should be closed and dome-shaped breaking gradually to four to seven rows of fully developed outer florets. Outer florets should be broad and slightly cupped with rounded tips. A bloom position at 45 degrees is preferred, but a top facing bloom is acceptable. In petite waterlily cultivars (from 1 to 3 inches) in diameter, the depth may contain fewer rows of ray florets in order to represent the waterlily form accurately. The depth should never be more than one-half the diameter of the bloom.

**7401—7415 MICRO WATERLILY Dahlias:** Micro Waterlily dahlias possess the same formation as Waterlily dahlias. In micro waterlily cultivars (up to 2 inches in diameter), the depth may contain fewer rows of ray florets in order to represent the waterlily form accurately. The depth should never be more than one-half the diameter of the bloom.

**7601—7615 NOVELTY FULLY DOUBLE:** dahlias will display distinct and different form from present classifications. The new formation must display good symmetry, including a closed, tight center, ray florets uniformly shaped and/or arranged differently from other fully double form characteristics.

**7701—7715 MICRO NOVELTY FULLY DOUBLE:** dahlias will display distinct and different form from present classifications. The new formation must display good symmetry, including a closed, tight center, ray florets uniformly shaped and/or arranged differently from other fully double form characteristics and be up to 2 inches.

**8001—8015 PEONY** Dahlias: At least two, but not more than five rows of ray florets surround the disc. Ray florets are broad, generally flat to slightly cupped and evenly spaced in a flat plane. Ray florets are equal or nearly equal in length from the bloom face to the back, not recurving or reflexing to the stem. Ray florets adjacent to the disc may be twisted or curled, but if present should be symmetrically arranged around the disc. Ideal depth is less than one-third the diameter. Disc flowers with 0 to 3 rows of pollen are desirable.

**8101—8115 MICRO PEONY** Dahlias: Micro Peony dahlias possess the same formation as Peony dahlias except they are up to 2 inches in diameter.

**8201—8215 ANEMONE** Dahlias: A dome of elongated tubular disc florets surrounded by one or more rows of ray florets. The ray florets should be uniform in shape, size and formation and be regularly arranged around the disc florets. The ray florets should be visible from the face of the bloom, creating a pleasant and balanced framing of the dome. The disc florets should also be uniform in shape, size and formation and be fully developed. Each disc floret should be entirely tubular or predominantly tubular with a fringed tip.

**8301—8315 MICRO ANEMONE** Dahlias: Micro Anemone dahlias possess the same formation as Anemone dahlias except they are up to 2 inches in diameter.

**8601—8615 NOVELTY OPEN** Dahlias: Dahlias with characteristics distinct and different from the present classifications are classified as novelty dahlias. The center should be open with the disc center in proper proportion to the ray florets.

**8701—8715 MICRO NOVELTY OPEN** Dahlias: Micro Novelty Open dahlias possess the same formation as Novelty Open dahlias except they are up to 2 inches in diameter.

**9001—9015 COLLARETTE** Dahlias: A bloom will have a single row of flat or slightly cupped ray florets arranged in a flat plane; the ray florets will uniformly overlap, preferably in the same direction with no gaps. The petaloids surrounding the disc should be approximately one-half to two-thirds the length of the ray florets. Eight ray florets are most desirable. A round floret tip is preferred. Disc flowers with 0 to 3 rows of pollen are desirable.

**9101—9115 MICRO COLLARETTE** Dahlias: Micro Collarette dahlias possess the same formation as Collarette dahlias except they are up to 2 inches in diameter.

**9201—9215 ORCHID Dahlias:** A single row of uniform, evenly spaced ray florets arranged in a flat plane surround the disc flowers. The ray florets should be straight and involute for two-thirds or more of their length and fully involute for at least one-third their length. Eight ray florets are most desirable. Disc flowers with 0 to 3 rows of pollen are desirable.

**9301—9315 MICRO ORCHID Dahlias:** Micro Orchid dahlias possess the same formation as Orchid dahlias except they are up to 2 inches in diameter.

**9401—9415 ORCHETTE Dahlias:** A bloom combines the involute characteristics of the orchid dahlia form and the petaloid characteristics of the collarette form. Ideally, eight ray florets uniformly surround the disc flowers in a flat, even plane. Ray florets should be straight and involute for at least half of their length and fully involute for at least one-fourth of their length. Ray florets should possess a corresponding petaloid at their base. Petaloids should be of a length which gives visual impact and not so small that they are not easily discernible at arm's length. Petaloids may lie flat within the base of the ray floret or slightly rise and/or cup upward toward the center of the bloom. Disc flowers with 0 to 3 rows of pollen are desirable.

**9501—9515 MICRO ORCHETTE Dahlias:** Micro Orchette dahlias possess the same formation as Orchette dahlias except they are up to 2 inches in diameter.

**9601—9615 SINGLE Dahlias:** The bloom has a single row of flat or slightly cupped ray florets arranged in a flat plane. They uniformly overlap, preferably in the same direction with no gaps. Eight ray florets are most desirable. Disc flowers with 0 to 3 rows of pollen are desirable. A round floret tip is preferred. The bloom is over two inches in diameter.

**9701—9715 MIGNON SINGLE Dahlias:** Mignon single dahlias possess the same formation as single dahlias. Disc flowers with 0 to 3 rows of pollen are desirable. The bloom is up to two inches in diameter.

## Color

**White zero (WH 0)** has been added to the white color class. It is the border (background) of the white color chip page.

**Official Color Chart:** The ADS Official Color Guide is the American Dahlia Society *Color Guide for Classifying Dahlias, 2003*. Note: (1) Light and Dark Blends will be blends dominated by colors from the recommended list below. Each ADS color is listed in either the Light or the Dark list and in only one of the lists. (2) Flame Blends will be blends containing one of the yellows listed plus one or more of the OR, RD, or BR colors listed. (3) If a blend has YL 1-YL 5 plus one of the OR, RD, or BR colors listed in the FL list, it will be a Light or Dark Blend, depending on which color dominates. For further clarification, see the *Guide to Judging Dahlias, 2022*, pp. 12-13.

**Classification Procedures for Color in Fully Double Dahlias:** Classification by color of fully double dahlias is determined by the color(s) appearing on either, or both, the face or reverse of the ray florets. The predominant color, as seen from 3 feet, will determine the color class and be listed first. All color designations will be in capital letters with the reverse ray floret color(s) enclosed in brackets [ ]. A slash (/) will appear between the face and reverse colors. For instance, a fully double novelty dahlia shows lavender on the face of the ray floret and a light blend of pink and yellow on the reverse; if the dominating color is lavender (on the face of ray floret), the classification is NX-L, L/[LB/PK/Y]; if the dominating color is the light blend (on reverse of ray floret), the classification is NX-LB, [PK/Y]/L.

### **Classification Procedures for Color in Open-Centered**

**Dahlias:** Classification by color of open-centered dahlias is determined by the color(s) appearing on the face of the ray florets except in ORCHIDS and ORCHETTES that are classified by color on the reverse of the ray florets. The color(s) on the ray floret will be listed with a capital letter(s) with the predominant color listed first, and the color of bicolor ray floret tips, secondary color(s) of blends, and variegation(s) listed in order of predominance. A slash (/) will appear after the capital letter(s), and lower case letters will represent the color(s) of petaloids in COLLAR-ETTES and ORCHETTES, domes of ANEMONES, eye zones where apparent, and the ray floret face of ORCHIDS and ORCHETTES. ORCHETTES will have a dash (-) after the face colors of the florets to describe the color(s) of the petaloids. For instance, an ORCHETTE has red reverse florets, yellow face and white petaloids. The classification would be OT R/y-w.

On occasion, petaloids, the face of an ORCHID or ORCHETTE, domes, and eye zones may appear variegated, as a blend, or bicolor. Judges should classify these cultivars with lower case letters (v for variegated, lb for light blend, db for dark blend, fl for flame blend, bi for bicolor) and insert them in front of the lower case color letters. For instance, the petaloids on a dark red COLLARETTE are variegated. The classification would be CO DR/v/pr/w. Thus, the variegated could then have a purple petaloid with white stripes or some other variegated distinguishing characteristic. For instance, an ORCHETTE has dark red reverse color, light blend face floret colors and dark blend petaloids. The classification would be OT DR/lb/pk/y-db/dr/w.

**BLENDS:** Light blends and dark blends are determined by the dominant (majority) blend color. For Example: cultivar XYZ has Purple 5 (a dark blend color) and yellow 1 (a light blend color) on the face of the ray florets. It will be a dark blend if the majority color is purple. It will be a light blend if the majority color is yellow. White in blends should be ignored when deciding if it's a light or dark blend. Or one may always think of white as the minority color when deciding the blend, no matter how much white is in the blend. There is no "majority" rule in flame blends. It does not matter which of the flame blend colors is the majority color as long as it fits in the color chips associated with flame blend.

**01 WHITE:** Pure white, ivory or cream with or without faint blushes of other colors. *ADS Color Guide* WH 0-9.

**02 YELLOW:** *ADS Color Guide* YL 1-24.

**03 ORANGE:** *ADS Color Guide* OR 1-24.

**04 PINK:** *ADS Color Guide* PK 1-24.

**05 DARK PINK:** *ADS Color Guide* DP 1-24.

**06 RED:** *ADS Color Guide* RD 1-24.

**07 DARK RED:** *ADS Color Guide* DR 1-12.

**08 LAVENDER:** *ADS Color Guide* LV 1-24.

**09 PURPLE:** *ADS Color Guide* PR 1-36 and BLACK.

**10 LIGHT BLEND:** Blends dominated by the lighter tints and tones of pink, yellow, lavender, and other pastels; also two-toned varieties of pastel tints and tones in which the central ray florets are of a different color than the marginal ray florets. Ignore white when determining a light or dark blend. Light blend colors include: YL 1 - YL 24; OR 1 - OR 10; OR 16 - 17; PK 1 - PK 24; DP 1 - DP 4; DP 6 - DP 8; DP 19 - DP 22; LV 1 - LV 8; LV 21 - LV 22; BR 1 - BR 3; BR 7 - BR 8; BR 10 - BR 11.

**11 BRONZE:** *ADS Color Guide* BR 1 - 24.

**12 FLAME:** Blends of red or orange hue that merges with yellow. All blend cultivars possessing these color chips are Flame Blends. Flame blend colors include: YL 6 - YL 24 combined with OR 12 - OR 15; OR 19 - OR 24; RD 1 - RD 24; BR 9; BR 14.

**13 DARK BLEND:** Blends dominated by dark reds, pinks, purples, oranges, lavenders and bronzes. Ignore white when determining a dark blend. Dark blends include: OR 11- OR 15; OR 18 - OR 24; DP 5; DP 9 - DP 18; DP 23 - DP 24; LV 9 - LV 20; LV 23 - LV 24; RD 1 - RD 24; DR 1 - DR 12; PR 1 - PR 36; BR 4 - BR 6; BR 9; BR 12 - BR 24.

**14 VARIEGATED:** Two or more distinct colors on the face or reverse of the ray florets, the variegating color arranged in dots, flecks, splashes, stripes, or narrow lines, which contrast with the basic color(s).

**15 BICOLOR:** Two or more distinct, clear and sharply separated colors on the face of the ray florets with the tip or central stripe contrasting. **Classify all blends (FL, LB, DB) and variegated with bicolor tips as bicolors.**

## Glossary of Terms

**Blend:** two or more merging colors on either the face or reverse of the ray floret OR two or more contrasting colors on either the face or reverse of the ray floret.

**Central Rays:** the short or immature ray florets comprising the central portion of the fully double flowers when at their prime stage.

**Disc:** a more or less flat, circular group of tubular florets fully visible in open-centered type dahlias.

**Disc Florets:** small tubular florets which make up the central part of the flower head, each with a pistil and stamens but generally no other conspicuous flower parts.

**Dwarf:** dahlia varieties that normally do not produce plant growth over 24 inches in height.

**Eye Zone:** a uniform band of contrasting color(s), less than one third the length of ray florets that surround the open-centered disc flowers.

**Floret:** one of the small flowers that collectively comprise the flower head.

**Fully Double:** flower heads with multiple rows of ray florets; the disc florets are immature and completely covered by the central rays when a bloom is at the prime stage.

**Incurved:** the ray florets curve forward along their length toward the face of the flower head.

**Involute:** margins of the ray florets roll inward along their longitudinal axis (length). When fully involute the margins touch or overlap so only the reverse of the floret is visible, appearing quill like.

**Lacinated:** the tip of the ray floret exhibits single or multiple splits, with adequate depth; tips either involute or revolute and twist in an irregular manner to present a fringed/frilled effect.

**Margin:** the edge of the ray floret, sometimes marked with a narrow contrasting color.

**Marginal Rays:** fully developed ray florets that establish and determine the maximum diameter of a bloom; mature florets rather than immature central ray florets.

**Petal:** the common name for the conspicuously colored part of a ray floret.

**Petaloids:** additional floral parts on ray florets having the form and appearance of smaller petals. Most noticeable in the collarette and orchette dahlias.

**Picotee:** fine line of contrasting color found on the margin of the ray floret.

**Ray Florets:** one of the broad, conspicuously colored florets, the structure of which suggests a single petal of an ordinary bloom. These form the radiating border in the open-centered type dahlias, or massed together, the flower head in fully double types.

**Recurved:** the ray florets curve backward along their length toward the stem.

**Reflexed:** A straight ray floret from the tip to the base that extends and drops toward the stem.

**Revolute:** margins of the ray florets roll back along their longitudinal axis (length). When fully revolute, the margins touch or overlap.

**Straight:** the ray florets have little or no curvature throughout their length.

## Cultivar Dissemination

### Undisseminated Cultivars

Cultivars submitted to the Trial Gardens (TG) and for Seedling Bench Evaluation (SBE) must comply with the eligibility rules for undisseminated dahlias. These cultivars must be 1) initially grown from seed and propagated for a total of two years, minimum (eligible on third year), or 2) a mutation or sudden variation or change in color, form, size or other characteristic of a dahlia plant or plant part “sport” perpetuated by vegetative propagation rather than from seed in the first year and then propagated for a minimum of three years total and during this period has demonstrated no reversion to the original variety. All sports, whether multicolored or solid, are eligible for submission to the SBE or TG as an undisseminated cultivar.

In order for cultivars, domestic or foreign, to qualify as undisseminated and be eligible for TG and or SBE, they must not be available to the public by any means. All stock of a cultivar within the confines of the United States or Canada must be controlled by one individual (originator, introducer, and/or grower) and be entered into competition by its cultivar identification, the name of originator and the name of the exhibitor.

## Dissemination Practices and Rules

**Sports:** Only tuber entries of a sport are acceptable for trial garden evaluation.

**Naming and Exhibiting Undisseminated Cultivars:** An undisseminated cultivar must be named with a two-digit numeric prefix and the originator's choice of an original name or possess a wholly numeric identifier. An undisseminated cultivar may compete in show competition for one or more years before it is submitted to a TG or SBE. Cultivars are eligible for SBE or TG competition for a period of two years provided the originator/introducer has notified the appropriate committee chairs. Thereafter, the cultivar is no longer "undisseminated" and the originator/introducer pledges to use best efforts to put the cultivar into commerce with the original name, minus the numerical prefix, if it scores 85 or more. An undisseminated cultivar may be given to another grower who may enter it in open competition without compromising the undisseminated status as long as the originator assigns the proper numeric prefix and variety name or number.

**TG and SBE Competition Procedures:** An originator may elect after receiving trial garden and/or seedling bench scores to hold a cultivar for further competition the following year; s/he must notify the Trial Garden Committee Chair and/or the Seedling Bench Evaluation Chair prior to October 10. After this notification, a numeric prefix will be added to the cultivar's name on all reports.

### Examples of Open Horticultural Competition Procedures:

*Flashinpan* (name of cultivar) entered in open horticultural competition in 2018 (the last two digits of the year entered in a show or some other numeric two-digit system of the originator's choosing) will be identified as *16-Flashinpan*. If an originator does not wish to name a cultivar, a wholly numeric identifier, e.g. *22-016*, may be used.

Either the numeric method or numeric and name, however, will be eligible for trial garden and ADS seedling bench evaluation in 2024 if it has been grown for a minimum of three years.

## Disseminated Cultivars

1. A cultivar that is offered for sale, whether it be through a catalog, advertisement, or by any other means.
2. A cultivar, otherwise undisseminated, that an originator distributes by tuber or cutting to other growers without providing an established numeric prefix and name by which the grower can show the seedling in ADS sanctioned shows.
3. A cultivar that wins two or more blue ribbons without a name that complies with the rules of undisseminated cultivars.
4. All cultivars that score 85 or higher in a TG or SBE unless notice of delay is given by October 10.
5. A cultivar that is listed in the most recent *Composite Listing of Dahlias* or any subsequent annual *Classification and Handbook of Dahlias*.

**Naming New Seedlings:** Check with the classification chair in order to determine if a cultivar with your chosen name exists. If the chosen name has already been given to another cultivar, and attempts to contact the originator in order to change/modify the name fail, the classification chair will add the originator's surname initial as the suffix to the chosen cultivar's name. If the originator is not known, the suffix "X" will be added to the name. Name length cannot exceed 22 characters; this rule includes letters, hyphens, apostrophes, and spaces. Otherwise, the names will be truncated.

## Size Classification of Dahlias

AA	(Giant)	over 10 inches in diameter
A	(Large)	over 8 to 10 inches in diameter
B	(Medium)	over 6 to 8 inches in diameter
BB	(Small)	over 4 to 6 inches in diameter
M	(Miniature)	up to 4 inches in diameter
MC	(Micro)	up to 2 inches in diameter
BA	(Ball)	over 3.5 inches in diameter
MB	(Miniature Ball)	over 2 to 3.5 inches in diameter
P	(Pompon)	up to 2 inches in diameter
ST	(Stellar)	over 2 inches in diameter
MST	(Micro Stellar)	up to 2 inches in diameter
WL	(Waterlily)	over 2 inches in diameter
MWL	(Micro Waterlily)	up to 2 inches in diameter
NX	(Novelty Double)	over 2 inches in diameter
MXN	(Micro Novelty Double)	up to 2 inches in diameter

PE	(Peony)	over 2 inches in diameter
MPE	(Micro Peony)	up to 2 inches in diameter
AN	(Anemone)	over 2 inches in diameter

*See instructions for using class numbers on next page.*

## Instructions for Using Class Numbers

**Table 1** is for Sized Dahlias. The left portion of the table shows the Size and corresponding first digit. The right side shows the Form and the corresponding second digit.

**Table 2** is for Other Forms. Because there is no size involved, each form has its own corresponding 2 digits.

**Table 3** is for Color. This table is used in conjunction with either table 1 or table 2.

## Examples of Using Class Numbers

**B-IC-FL** is **2412**. B size, first digit is 2; IC, second digit is 4 (both digits come from Table 1); FL, Flame, is 12 (from Table 3).

Table 1: Size (First Number)		Table 1: Form (Second Number)		Table 3: Color (Last Two Numbers)	
B	2	IC	4	FL	12

**WL-DP** is **7305**. WL is a 73 (from Table 2); DP, Dark Pink, is 05 (from Table 3).

Table 2: Form (First Two Numbers)		Table 3: Color (Last Two Numbers)	
WL	73	DP	05

Working backward, **4010** is **M-FD-LB**. First digit, 4, is M; second digit, 0, is FD (both digits come from Table 1); last two digits, 10, is LB, Light Blend (from Table 3).

Table 1: Size (First Number)		Table 1: Form (Second Number)		Table 3: Color (Last Two Numbers)	
M	4	FD	0	LB	10

Working backward, **9015** is **CO-BI**. First 2 digits 90, is CO (from Table 2); last two digits, 15, is BI, Bicolor (from Table 3).

Table 2: Form (First Two Numbers)		Table 3: Color (Last Two Numbers)	
CO	90	BI	15

## 2026 Classification Changes

2025 #	Cultivar Name	2026 #	Size	Form	Color Class	Color Chips
1106	ALLEN'S TSUNAMI	1406	A	IC	R	RD19
1202	HS EDDIE	1213	A	SC	DB	DP24/wh5
4007	DORI T	3007	BB	FD	DR	DR12
4007	RIVER'S PENELOPE	4109	M	ID	PR	PR26
6003	FERNCLIFF RUSTY	6005		BA	DP	DP15
3302	CONNIE DAHUAHUA	3302	CONNIE DOHUAHUA (SPELLING CORRECTION ONLY)			

## Cultivars Retired from Classification Changes

Each year the classification committee receives requests for cultivar changes in classification. Certain cultivars have appeared regularly on the change request list. The list that follows identifies cultivars that the classification committee will no longer consider for reclassification.

						Retirement	Year
1010	ALMAND JOY (CLIMAX)	A	FD	LB	LV6/WH3		2004
4102	BROOKSIDE J COOLEY	M	ID	Y	YL11		2007

1010	KIDD'S CLIMAX	A	FD	LB	PK22/YL11		2004
1107	SPARTACUS	A	ID	DR	DR5		2003
3207	TAYLOR NELSON		BB	SC	DR		2004

## Abbreviations for Originators from the United States and Canada

**Western Region:** The originator abbreviation will be followed by a hyphen. Example: **AM-**

**Central Region:** The originator abbreviation will be followed by a period. Example: **BO.**

**Eastern Region:** The originator abbreviation will be followed by an apostrophe. Example: **BKE'**

**NOTE:** See *Abbreviations and Countries* prior to the table where cultivars are listed by classification number.

## Abbreviations for Foreign Originators

All foreign originators will not have any diacritical marks following the abbreviation. EXAMPLE: **GE**

## Alphabetical Listing of Dahlia Cultivars

For blooms with more than one color (hue, tint, and tone) in evidence, colors are indicated by dominant color first and then secondary color(s) in order of most color representation.

1st Column	Name of Cultivar ‡ indicates PNW Supplemental Classification Available (See pg. 126)
2nd Column	ADS Classification Number
3rd Column	Cultivar Size
4th Column	Cultivar Form
5th Column	Cultivar Color Class
6th Column	Cultivar Color Description
7th Column	Originator Abbreviation
8th Column	Cultivar Year of Introduction or *. <i>The asterisk (*) indicates that the exact date of introduction is not known and that the variety has been in open competition at least since this date.</i>

# Numerical Listing of Dahlia Cultivars with Awards by Geographical Region

- Column 1** ADS Classification Number
- Column 2** Name of Cultivar
- Column 3** Changes and Awards
- #** New Classification for 2025
  - C** Award for Les Connell Medal  
(most awards in first 5 years)
  - D** Award for the Lynn B. Dudley Medal  
(Seedling Bench)
  - H** Award for the Derrill Hart Medal (Trial Garden)
  - G** Award for the Evie Gullikson seedling bench medal
  - G\*** Award for the Evie Gullikson  
trial garden medal
  - J** Award for the Stanley Johnson Medal  
(most higher awards)
- Column 4** Total Number of Blue and Higher Awards in all three regions— Western, Central, and Eastern
- Column 5** Number of Blues for Western Region
- Column 6** Number of Higher Awards for Western Region
- Column 7** Number of Blues for Central Region
- Column 8** Number of Higher Awards for Central Region
- Column 9** Number of Blues for Eastern Region
- Column 10** Number of Higher Awards for Eastern Region\*  
*The EASTERN region of the continent includes the North Atlantic Conference, Southern States Conference, Philadelphia, the Carolinas and Eastern Canada with the exception of Hamilton.*

## Stanley Johnson Medal Winners

The Stanley Johnson Medal is awarded to the cultivar that has the most higher awards in a given growing season. The Award can be won only once. The following are Stanley Johnson Medal Winners and the year they won the most higher awards:

1986	APRIL DAWN	2007	MARY'S JOMANDA
1987	MAGIC MOMENT	2008	PAM HOWDEN
1988	WALTER HARDISTY	2009	CAMANO SITKA
1989	HAMILTON LILLIAN	2010	MIDNIGHT STAR
1990	ZORRO	2011	ELVIRA
1991	HAMARI ACCORD	2012	LAKEVIEW GLOW
1992	JESSICA	2013	VERRONE'S MORNING STAR
1993	INLAND DYNASTY	2014	PARKLAND RAVE
1994	SPARTACUS	2015	AC ABBY
1995	MARY JO	2016	FANCY PANTS
1996	ROSE TOSCANO	2017	AC BEN
1997	EDNA C	2018	CLEARVIEW DANIEL
1998	JESSIE G	2019	CLEARVIEW EDIE
1999	TARATAHI LILAC	2020	NO SHOWS - COVID-19
2000	GLENBANK TWINKLE	2021	BLOOMQUIST JEAN & HOLLYHILL BLACK BEAUTY
2001	CORNEL	2022	LAKE HILLS CREAMSICLE
2002	KATHY'S CHOICE	2023	KA'S KHALEESI
2003	KENORA JUBILEE	2024	KELSEY DWARF
2004	EMBRACE	2025	IRISH GNOME
2005	VALLEY PORCUPINE		
2006	CAMANO PET		

## Les Connell Medal Winners

The Les Connell Medal is awarded to the cultivar that has the most total awards in the first 5 years since introduction.

1. The cultivar must have been introduced through either the Trial Garden or Seedling Bench.
2. Awards earned prior to the official introduction year are not counted.
3. The cultivar need not win an award in each year of the first 5 years.
4. The cultivar must still be listed in the CHD on the fifth year otherwise the award will go to the cultivar with the next highest total that is still listed in the CHD.
5. In case of a tie, duplicate awards will be given.

2019	KELSEY DWARF	2023	BLOOMQUIST JEAN
2020	NO SHOWS - COVID-19	2024	KA'S KHALEESI
2021	CLEARVIEW BUTTERSCOTCH	2025	LAKE HILLS CREAMSICLE
2022	CLEARVIEW CAMERON

## Characteristics of the Dahlia: Desirable and Undesirable

When evaluating a cultivar, the judge must balance the good with the bad. Few dahlias, if any, possess all positive characteristics. Although the ADS scorecard lists some faults that a bloom may possess, the judge must also consider the strengths of a bloom and balance all attributes as they assign an overall point value.

### FORM (30 points)

**Desirable                      Undesirable**

#### Symmetry/Centers

Round	Oval
Good proportion	Poor proportion
Adequate height	Too high, too low
Full	Misshapen/bull nose
Tight	Multiple Centers Dished Elongated/Oblong Open (blown) Weak Hard/green

#### Contour

Good build	Asymmetrical
Full petallage	Lopsided
Ideal ray floret arrangement	Flicked floret  Gaps present Rough/staghorn Lacks ray florets

#### Fully Developed (SBE)

At peak of maturity	Over mature  Immature
---------------------	-----------------------------

#### True to Form

Meets ideal standard	Mixed form or does not meet ideal standard
----------------------	--

### COLOR (20 points)

**Desirable                      Undesirable**

#### Overall

Clear	Dull/Gray
Bright	Impure
Pure	Blotchy/Coarse
Sparkling	Streaked
Lustrous	Veined

#### Blends

Smooth transition between colors	Uneven
Harmonious or contrasting colors	Clashing colors

#### Bicolors and Variegated

Even distribution of 2nd color	Uneven
Good contrast	Poor contrast
Sharp/distinct separation	Bleeds
Adequate amount of 2nd color	Inadequate 2nd color

#### Multiple Blooms

Uniform Color	Bracts Contrasting obvious petaloids Wolf petals
---------------	--

#### Other Undersirable Faults

SBE Bruising	Conspicuous Bracts
SBE Insect Injury	Fading, bruising
SBE Mildew	Spotting

**SUBSTANCE (10 points)**

Desirable	Undesirable
Springiness and toughness of the flower parts	Ray florets soft, lack springiness, droopy
Firm, crisp, stiff, thick	Not turgid
Uniform back and face	Ray florets missing, shriveled, thin, brown, dirty, misshapen
	Overly mature, lack of substance affects symmetry and color

**FOLIAGE (10 points)**

Desirable	Undesirable
Clean	Dirty, unappealing
Luxuriant color	Pale, blotchy
Good proportion, artistic formation	Out-of-proportion, poor texture
Uniform size & form	Too small, too large
Alternate & opposite	Wilted
Turgid	Sparse
Adequate Amount	Coarse, bubbly Folded, crinkled

**STEM (10 points)**

Desirable	Undesirable
Strong, erect, graceful, round	Weak, willowy, rubbery, wiry
Straight	Irregular, crooked
Good proportion: length & diameter	Too long or too short
Even, smooth, circular in cross-section	Too thin or too large
One color (minor if not)	Misplaced spur leaf (minor)

**BLOOM POSITION (10 points)**

Desirable	Undesirable
45 degrees	Down facing Side facing
Note: Top facing OK for Poms, MB, BA, and WL	
	Top facing on some forms (minor for AA & A sizes)

**JUDGING GUIDELINES**

Characteristic	100%	90%	85%	80%
Form	30	27.0	25.5	24.0
Color	20	18.0	17.0	16.0
Substance	10	9.0	8.5	8
Stem	10	9.0	8.5	8
Foliage	10	9.0	8.5	8
Bloom Position	10	9.0	8.5	8
Uniformity/ Floriferousness	10	9.0	8.5	8

## **Trial Garden Procedures and Rules of the American Dahlia Society**

1. The American Dahlia Society (ADS) has established trial gardens located in various regions of the country for dahlia promotion, evaluation, and scoring of undisseminated cultivars (using the current Guide to Judging Dahlias). Introducers or originators may select the trial garden(s) of their choice and send their prospective cultivar(s) for exposure and scoring. The American Dahlia Society has established the following rules in order to grow and evaluate all cultivars uniformly.
2. The location for a potential trial garden must offer accessibility to the public during daylight hours throughout the growing season. The chosen location should have fertile, well-drained soil with full sun for at least half the day, access to water, and some wind protection.
3. Upon satisfactory operation as a probationary trial garden for not fewer than two years and upon approval of the ADS Executive Board, ADS may establish a new trial garden. Growers may enter an undisseminated cultivar in a probationary trial garden without charge and receive a score, understanding that scores of 85.0 or greater will not be listed in the classification book, receive a Trial Garden Certificate nor will ADS include the result in Derrill W. Hart or Evie Gullikson award averages.
4. A local dahlia society or consortium of societies must sponsor a trial garden. The society or consortium of local societies shall name a senior judge as the Trial Garden Director and name a committee of willing, capable, and competent members who also grow dahlias and reside in near proximity to the garden. The Executive Board and the Trial Garden Chairman must approve the Director of the Trial Garden. Changes in the Trial Garden personnel are subject to the approval of the Trial Garden Chairman.
5. The Trial Garden Director and society committee will follow good gardening practices, including tilling of the soil prior to planting, staking, fertilizing, tying, insect and disease control and maintenance of adequate moisture in the soil. The ADS has established the following rules so that similar conditions exist in each trial garden.
  - a. **Fertilizer:** The rate of application and kind of fertilizer will depend upon the nature of the soil, the amount of rainfall, and the rate of growth of the plants. A professional soil analysis will be made each two to three years to determine appropriate fertilizer practices.
  - b. **Spacing of plants:** The distance between plants shall be determined by the supervising committee and shall be sufficiently spaced to permit proper care of the plants, air circulation between each plant, and for convenience in judging.
  - c. **Controls:** Several standard varieties of dahlias should be placed around the trial plantings to serve as an experimental control for the conditions that exist in the garden.
  - d. **Planting Date:** Planting in the garden will commence depending upon the average frost-free date of the area and at the discretion of the Trial Garden

Director. The Director and Committee should do their best to protect the plants from late frosts and other adverse weather whenever possible. Shading of the plants, however, during blooming is not appropriate.

- e. **Grouping of Sizes and Forms:** Plant all "A" and "B" dahlias including Ball, all "BB" varieties, all miniatures, pompons, stellar, waterlily and all open-centered, such as singles, orchid flowering, anemone, etc. in respective groups, which promotes uniform treatment. Judges should not, however, be allowed to use the location of the plant as a key input to the determination of the classification of the entry.
  - f. **Disbranching:** Cultivars should be grown in a manner to achieve the bloom size suggested by the originator. Use the following guidelines: AA and A size, four laterals each plant; B size, five or six laterals each plant; BB, BA, ST, and WL size, six or eight laterals each plant. Disbud all of the above, removing secondary laterals (except replacements) in order to allow one bloom on each lateral. All pompons, miniatures and open-centered should be topped and disbudded but not disbranched beyond one or two pairs of leaves.
  - g. **Deadheading:** Remove blooms past their prime for judging from the plant, along with stem/stalk down to a replacement lateral.
  - h. **Virused Entries:** Remove any cultivar exhibiting signs of stunt or disease and destroy, using care to avoid infection of remaining stock. Notify the originator of stock destroyed.
  - i. **Destruction of stock:** At the end of the growing season, dig all clumps on which originators have requested return of tubers and destroy all others.
  - j. **Confidentiality of Entries:** The Director will create a confidential reporting list of all cultivars planted that identifies the originator, originator's classification, and assigned identification. Each entry in the Trial Garden will be tagged with this coded identification on the stakes of the entry and will be used by the judges when scoring. Neither the originator's name nor the name given to the cultivar nor its proposed classification will be divulged to anyone prior to the end of the judging season. Upon completion of judging, that information may be placed on the entry.
6. Either originators or their agent may enter undisseminated cultivars, using the current official entry blank supplied by the American Dahlia Society, published annually in the ADS Bulletin, and available on the ADS website.
  7. The Director of each Trial Garden will provide the Trial Garden Chairperson with the shipping information for his garden and the date that roots or plants should be sent for trial. The Trial Garden Chairperson shall prepare an article including that information for publication in the December Bulletin.
  8. After confirming that space is available, an originator or designee shall send the Trial Garden Director three roots or plants of a cultivar. The new variety becomes eligible for evaluation in its third year. Each entry shall be undisseminated, not commercially available anywhere, and not listed in the *Classification and Handbook of Dahlias*. Originators will submit a trial garden entry fee and a picture of the entry. The entry fee is to be set by the ADS Executive Board and published in the ADS *Bulletin*. The Trial Garden Director will acknowledge receipt and condition of roots or plants prior to planting and as soon as possible if tubers or plants arrive in poor

condition.

9. Introducers may request the return of all roots of their introduction(s) at the end of the growing season. This request must be submitted to the Trial Garden Director by September 1 in addition to the cost of postage and the established fee as determined by the Executive Board. If the Trial Garden does not provide return service, the Director should make that information available to originators at the time they make reservations.
  
10. Records: It shall be the duty of the Trial Garden Director or his agent to:
  - a. measure the diameter and the depth of a suitable number of blooms at various times during the growing season in order to determine the size of the bloom;
  - b. record the length and the character of the stem and the position of the flower on the stem;
  - c. describe the color according to the current official ADS color standard;
  - d. make notes on the plant habit of each plant including the characteristics of the foliage, stalk, and stem;
  - e. arrange to have each entry evaluated and scored at least three times, with the majority of those evaluations to be supplied by a Senior Judge;
  - f. record the first bloom date.
  
11. Judging: For a qualifying final score, at least three judges shall judge each entry, a majority of whom are Senior Judges.
  - a. The sponsoring society of a trial garden shall encourage its members to manage the garden with good husbandry and pride, doing whatever it takes to show the garden in its finest array. The society will encourage its judges to judge the entries and promote this evaluation by providing judging seminars, picnics, etc. in order to entice wide participation from both its own and other society members who live within the general region of the garden.
  - b. If it appears that a cultivar will score more than 80, judges should evaluate the entry a number of times throughout the season if at all possible. If an entry does not develop blooms worthy of scoring during the season, the defects should be noted on the report to the originator.
  - c. Each Trial Garden Director shall establish a final date for judging cultivars. This date shall be such that the Director can complete a summary of all the results on all of the entries and send it to the Chairman of the ADS Trial Garden Committee by October 10 for compilation of scores and classification. This information will also be sent to the President, the Judges Accreditation Chair, and the Classification Chair for reconciliation with the Seedling Bench Evaluation Reports for the December issue of the Bulletin. Directors may continue to score entries after that date if conditions in the garden permit, but they shall not consider them when they determine the average score for an entry.
  - d. The Trial Garden Director will record all scores with the name of the

judge on the reporting list. The Director will compile an arithmetic average score. In compiling this score, the scores of Accredited Judges shall be averaged at half the weight of a Senior Judge as follows:

- e.  $\text{Average Score} = (\text{Sum of Sr. J. Scores} + .5 \times \text{Sum of Ac. J. Scores}) / (\# \text{ of Sr. J.} + .5 \times \# \text{ of Ac. J.})$ .

For example, consider SR1@86, SR2@86 and AC1@81:  $(86+86+40.5)/2.5 = 85$ ; or SR3@84, SR4@83 and AC2@90:  $(84+83+45)/2.5 = 84.8$ .

The Trial Garden Director shall have the responsibility to exclude from the averaging process scores that are obviously inconsistent with the quality of the entry. The Director may at his discretion use the scores of Honorary and Candidate Judges as AC scores in the determination of a final average if s/he can confirm that the score meets the immediately preceding requirement of reasonability and/or was developed in an appropriately supervised training process. If the number of AC judges is more than two times the number of SR judges, the Director may delete the lowest and highest of the AC scores in turn until the number of AC judge scores becomes fewer than or equal to twice the number of SR judges scores. Once the Director calculates the results, the Director shall not arbitrarily change the number; i.e., an average of 84.94 should be rounded down to 84.9 and an average of 84.96 should be rounded up to 85.0.

- f. Each Trial Garden Director will notify originators of the final average score and classification of their cultivars. If a cultivar was not scored, a brief explanation will be given.
- g. All cultivars that score 85 or more will be reported in the December Bulletin. If a cultivar is to be withheld for trial the second year, it is the responsibility of the originator to notify the Director of Trial Gardens and the Classification Chairperson. Those entries will be noted in the *ADS Bulletin* as NOT FOR RELEASE. The cultivar's name will also have a two digit numeric prefix as designated by the originator.
- h. No variety is eligible for entry in the ADS Trial Gardens for more than two years, which shall be consecutive and if entered in the same Trial Garden the second year, the higher score will be certified.
- i. Entries scoring 85 or more points shall receive a Trial Garden Certificate.
- j. Originators or authorized agents must include the name(s) for their cultivar(s) at the time of entry. If the entry does not score, the name can be used for another entry. The name must be acceptable to the Chair of Classification, and if it is to be listed in the Classification Book, the cultivar's name will not have a length of more than 22 characters.
- k. For cultivars that achieve a score of 85 or more in three or more Trial Gardens, a Derrill W. Hart medal will be awarded to the cultivar that has the highest average Trial Garden score as follows:
- AA (0001-0515) or A (1001-1515)
  - B (2001-2515)
  - BB (3001-3515),
  - M or MC (4001-5515),

- BA, MB, or P (6001-6215),
- ST, MST (7001-7115), NX or MNX (7601-7715)
- WL or MWL (7301-7415)

The highest 3 scores over 85 shall be used to determine the average. In the case of ties, duplicate awards will be made.

- l. For cultivars that achieve a score of 85 or more in three or more Trial Gardens, an Evie Gullikson medal will be awarded to the cultivar with the highest average three Trial Garden scores in the following categories: PE, AN, NO, CO, O, OT, S, MS (8001-9715). All other rules in 11 j apply to this award.
- m. The receipt of a Derrill W. Hart medal or an Evie Gullikson medal shall be construed as a pledge by the originator to introduce the variety in the year following. If the variety is not to be introduced, the medal shall be awarded to the next highest scoring cultivar that will be introduced into commerce. Any dahlia having scored 85 points or more at any one trial garden shall be considered a disseminated variety in the second year following its initial trial garden evaluation.

Amended October, 2018 - RM

# ADS Seedling Bench Evaluation Procedures & Rules

Offered in Cooperation with the American Dahlia Society

## ENTRIES AND JUDGING

1. A separate section, identified as the A.D.S. Seedling Bench Evaluation Section shall be provided by the show officials. The new variety becomes eligible for evaluation in its third year. Three blooms of a given variety must be entered.
2. No charge for entry in the A.D.S. Seedling Bench Evaluation nor requirement of membership in a local society may be imposed on an exhibitor for entering this section.
3. No variety is eligible for entry in the A.D.S. Seedling Bench Section for more than 2 consecutive years and if entered contrary to this provision, its most recent scores shall be discarded. A variety may be entered the second year in a show held by the same society in which it entered the year before, and if so entered, the higher score will be certified.
4. All entries entered in the Seedling Bench Evaluation must be named and that name must be placed on the entry tag. If an entry does not achieve a final score of 85 and that variety is no longer entered for Seedling Bench Evaluation, the name may be reused.
5. Name and address of originator, exhibitor and introducer shall be recorded on a form to be filed with show officials and the entry tag on the exhibit shall be marked with an identifying number only keyed to such form.
6. Not more than one entry of a variety may be made but there is no limit on the number of varieties that may be entered. Varieties entered may be grown and exhibited by either the originator or his representative.
7. All entries must be judged by at least 2 Senior Judges and not more than 2 Accredited Judges, providing that at least 3 judges participate in scoring each variety and that the number of Senior Judges outnumber the Accredited Judges.
8. If a variety shows evidence of disease or if in the opinion of the judges, an entry is not deemed worthy, it should be eliminated from scoring. A notation should be made on the entry tag why the entry was not scored.
9. Only Senior and Accredited Judge scores will be used to determine the official reported score of each entry. The final score will be the average of all scores.
10. No exhibitor or other person may judge any seedling in which that person has an interest.
11. Each entry scoring 85 or more shall receive an A.D.S. Seedling Award ribbon.
12. The entry with the highest average of any variety over 85 points shall receive an A.D.S. Achievement Award ribbon. In case of a tie, judges must

decide which variety possesses the greatest and most outstanding distinction over similar standard varieties.

13. The originator of each seedling which scores 85 or more in the Seedling Bench Evaluation shall receive a Certificate for Seedling Bench Evaluation with a seal of the society affixed and signed by the President and Secretary.
14. A Lynn Dudley medal will be awarded to the cultivar which has the highest average Seedling Bench Evaluation score as:
  - a. AA (0001-0515) or A (1001-1515)
  - b. B (2001-2515)
  - c. BB (3001-3515)
  - d. M or MC (4001-5515)
  - e. BA, MB, or P (6001-6215)
  - f. ST, MST (7001-7115), NX or MNX (7601-7715)
  - g. WL or MWL (7301-7415)
  - h.

The highest 3 scores shall be used to determine the highest average. In the case of ties, duplicate awards will be made.

15. An Evie Gullikson medal will be awarded to the cultivar which has the highest average Seedling Bench Evaluation score as an open center or disc center (8001-9715). All other rules apply to this award.
16. The receipt of a Lynn B. Dudley medal or an Evie Gullikson Medal shall be construed as a pledge by the originator to introduce the variety in the year following. No medal will be awarded unless the variety is introduced accordingly. If the variety is not introduced, the medal shall be awarded to the next highest scoring cultivar that will be introduced into commerce. Any dahlia having scored 85 points or more at any one show shall be considered a disseminated variety in the second year following its initial bench evaluation.

# Important Information

## Available on the ADS Website

### ADS Reporting Guidelines

Local show officials are responsible for reporting results from their shows to the ADS. This information includes varieties that won blue ribbons and higher awards. The ADS classification committee will communicate directly with show officials and will supply them with appropriate forms to complete. Information can also be found on the ADS website.

### ADS Scorecards

The ADS has two official scorecards, as well as written guidelines for scorecard use. They are for:

- Fully double dahlias
- Open-centered dahlias

These scorecards are used when evaluating entries in the trial gardens and in ADS bench evaluation competition. The scorecards are also useful as general guides when judging entries in dahlia shows.

The most up-to-date versions of the scorecards as well as the written guidelines can be found on the ADS website.

American Dahlia Society  
Seedling Evaluation Scorecard for **Fully Double** Cultivars

Date \_\_\_\_\_ Time \_\_\_\_\_ Location \_\_\_\_\_ Number of Plants \_\_\_\_\_ Cultivar ID \_\_\_\_\_

Classification \_\_\_\_\_ ADS Color Chips \_\_\_\_\_

1. Determine further classification as a type if possible.  
2. Identify faults of blooms at arm's length and, if possible, judge early or late in the day.  
3. Do not include blooms used their prime when determining faults in the trial garden but do include several blooms close to prime condition (AA-A, S, S4, BSM, B, S) when possible.  
4. See the back of this sheet for recommendations. Circle the faults identified.  
5. Consider both the severity and extent of the fault when you determine the deduction.  
6. Use the DNS section of the scorecard for entries that are clearly not worthy.  
7. Use dashes -- for faults.

		SCORE
<b>Form</b>	<b>30 points</b> -- If no faults are detected. Check bloom for irregular or misshapen centers, gaps, asymmetrical contour, adherence to the current ideal definition, and mixed form among the florets. Check depth ratio against current ideal. Fault if the ratio is less than ideal or is greater than one.	30
<b>Depth</b>	<b>20 points</b> -- If no faults are detected. Look for color that is not dull, blotchy, streaked, or faded. Blending is a fault in bicolor and variegated blooms. Uneven distribution of the second color is a fault for all the cultivars with two or more colors.	20
<b>Score for top half:</b> <small>Guides: 44-50 = should score; 42.5 to 43.5 = try to score; 41-42 = strong bottom scores needed to score; 40.5 and below = unlikely to score</small>		_____
<b>Substance</b>	<b>10 points</b> -- If no faults are detected. Look for soft ray florets that lack springiness. Other faults include <i>thru-ticks</i> , <i>misshapen</i> , and <i>falling florets</i> .	10
<b>Stem</b>	<b>20 points</b> -- If no faults are detected. Check for stems that are too small, too long, too short, too thick, too thin, or enter the bloom off center.	20
<b>Foliage</b>	<b>20 points</b> -- If no faults are detected. Look for leaves that are too small or too large for the blooms. Ideally leaves are identical and opposite each other on the stems.	20
<b>Bloom Position</b>	<b>30 points</b> -- If no faults are detected. Overlapping blooms is a serious fault. Use facing blooms as the basis. <b>40*</b> is preferred for most forms, but top being is fine for balls, pom-poms, and spirals.	30
<b>Uniformity (Bench)</b>	<b>10 points</b> -- If no faults detected. Score uniformity on bench. <b>Forfulness</b> in trial garden. In ADS bench evaluation, check blooms for uniformity of form, color, size as well as for each of the other evaluation characteristics.	10
<b>OR</b>		
<b>Forfulnessness (Trial Gardens)</b>	In trial gardens, score for <b>Forfulnessness</b> : Very few blooms or blooms too late for local shows are serious faults.	10
<b>Score for bottom half:</b>		_____
<b>Judge's Printed Name</b>	Judge's Signature _____	Total Score _____
Check One: <input type="checkbox"/> Candidate Judge <input type="checkbox"/> Accredited Judge <input type="checkbox"/> Senior Judge <input type="checkbox"/> Honorary Judge	Note: Only one judge per score sheet. Each judge must use a separate score sheet.	
<b>Entry Not Worthy</b> It is occasionally necessary to judge an entry that will clearly not score above 80. In such an instance, please circle or underline the reason(s) for that conclusion. Always sign centered, consistently marked centers, too few ray florets, highly nonuniform color, many well florets (color or form), consistently downgraded, stunted plants, very poor stems, very poor proportion, very poor color. Additional scoring is not necessary. Circle DNS at right. → → → DNS
